

## Common hazardous drugs in healthcare

|                            |                                    |                                 |                             |
|----------------------------|------------------------------------|---------------------------------|-----------------------------|
| Alfacept*                  | Diethylstilbestrol                 | Interferon beta 1b*             | Procarbazine                |
| Aldesleukin                | Docetaxel                          | Irinotecan HCl                  | Progesterone                |
| Alemtuzumab                | Doxorubicin                        | Leflunomide                     | Progestins                  |
| Alitretinoin               | Dutasteride                        | Lenalidomide*                   | Rasagiline mesylate*        |
| Altretamine                | Entecavir*                         | Letrozole                       | Raloxifene                  |
| Amsacrine                  | Epirubicin                         | Leuprolide acetate              | Raltitrexed                 |
| Anastrozole                | Ergonovine/<br>Methylergonovine    | Lomustine                       | Ribavirin                   |
| Arsenic Trioxide           | Estradiol                          | Mechlorethamine                 | Risperidone*                |
| Asparaginase               | Estramustine<br>phosphate sodium   | Medroxyprogesterone<br>acetate* | Rituximab                   |
| Azacitidine                | Estrogen-Progestin<br>Combinations | Megestrol                       | Sirolimus*                  |
| Azathioprine               | Estrogens,<br>Conjugated           | Melphalan                       | Sorafenib*                  |
| Bexarotene                 | Estrogens, Esterified              | Menotropins                     | Streptozocin                |
| Bicalutamide               | Estrone                            | Mercaptopurine                  | Sunitinib malate*           |
| Bleomycin                  | Estropipate                        | Methotrexate                    | Tacrolimus                  |
| Bosentan                   | Etoposide                          | Methyltestosterone              | Tamoxifen                   |
| Bortizomib*                | Exemestane                         | Mifepristone                    | Temozolomide                |
| Busulfan                   | Finasteride                        | Mitomycin                       | Teniposide                  |
| Capecitabine               | Floxuridine                        | Mitotane                        | Testolactone                |
| Carboplatin                | Fludarabine                        | Mitoxantrone HCl                | Testosterone                |
| Carmustine                 | Fluorouracil                       | Mycophenolate mofetil           | Thalidomide                 |
| Cetorelix Acetate          | Fluoxymesterone                    | Nafarelin                       | Thioguanine                 |
| Chlorambucil               | Flutamide                          | Nelarabine*                     | Thiotepa                    |
| Chloramphenicol            | Fulvestrant                        | Nilutamide                      | Topotecan                   |
| Choriogonadotropin<br>alfa | Ganciclovir                        | Oxaliplatin                     | Toremifene citrate          |
| Cidofovir                  | Ganirelix Acetate                  | Oxytocin                        | Tositumomab                 |
| Cisplatin                  | Gemcitabine                        | Paclitaxel                      | Trastuzumab                 |
| Cladribine                 | Gemtuzumab<br>ozogamicin           | Palifermin*                     | Tretinoin                   |
| Clofarabine*               | Gonadotropin,<br>Chorionic         | Paroxetine HCl*                 | Trifluridine                |
| Colchicine                 | Goserelin                          | Pegaspargase                    | Trimetrexate<br>glucuronate |
| Cyclophosphamide           | Hydroxyurea                        | Pemetrexed*                     | Triptorelin                 |
| Cytarabine                 | Ibritumomab tiuxetan               | Pentamidine<br>isethionate      | Uracil Mustard              |
| Cyclosporin                | Idarubicin                         | Pentetate calcium<br>trisodium* | Valganciclovir              |
| Dacarbazine                | Ifosfamide                         | Pentostatin                     | Valrubicin                  |
| Dactinomycin               | Imatinib mesylate                  | Perphosphamide                  | Vidarabine                  |
| Dasatinib*                 | Infliximab*                        | Pipobroman                      | Vinblastine sulfate         |
| Daunorubicin HCl           | Interferon alfa-2a                 | Piritrexim isethionate          | Vincristine sulfate         |
| Decitabine*                | Interferon alfa-2b                 | Plicamycin                      | Vindesine                   |
| Denileukin                 | Interferon alfa-n1                 | Podofilox                       | Vinorelbine tartrate        |
| Dienestrol                 | Interferon alfa-n3                 | Podophyllum Resin               | Vorinostat*                 |
| Dinoprostone               | Interferon beta 1a*                | Prednimustine                   | Zidovudine                  |
|                            |                                    |                                 | Zonisamide*                 |
